

## Porches/Ramp Extensions

Ramp for standard manual pallet jacks:

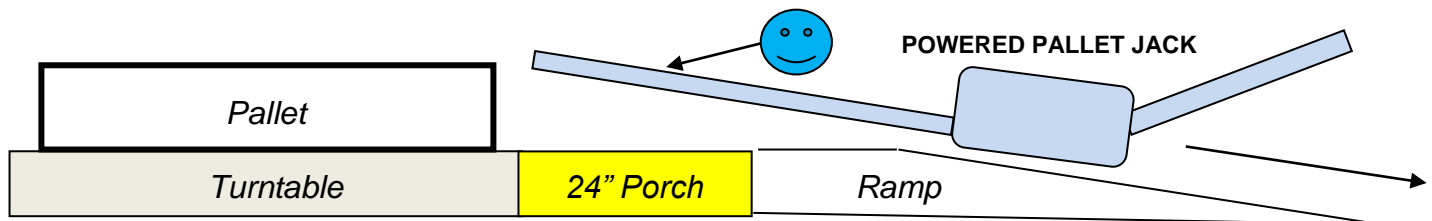

### ORMP-S – Ramp for manual pallet jack loading - 48”W x 60”L

Some special manual and most powered pallet jacks have longer or thicker forks. This creates a problem when the operator attempts to back up after placing the pallet on the turntable. When the powered pallet jack starts down the ramp incline it tilts the front of the forks up so that the forks get stuck in the pallet.

The solution is to add more flat surface to the ramp so that the forks are clear of the pallet before starting down the ramp incline.

### OPE1-S – 24”L x 48”W porch extension for powered pallet jacks

Some material handling equipment with very long forks may require a 40” Porch or Ramp Extension:

### OPE2-S – 40”L x 48”W porch extension for powered pallet jacks

**IMPORTANT:** We recommend a 24” or 40” Porch for all powered pallet jacks (powered walkies).

**NOTE:** If a problem is discovered after installation or the customer changes material handling equipment, both Porch/Ramp Extension options can be retro-fitted to a machine on site.
